## Mosquito Growth Regulator

### Extended Residual Catch Basin Control

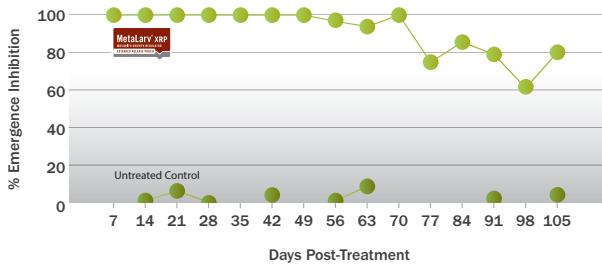

Based on US field evaluations, MetaLarv® XRP Mosquito Growth Regulator provides on average 90 – 100 days of operational residual control in catch basins following a single application under typical environmental conditions.

In addition, MetaLarv XRP provides multiple point sources within a catch basin (vs. a single point source for briquets) for CONSISTENT, residual control, application over application.

#### FIELD STUDY

EI of *Culex pipiens* in naturally infested catch basins after treatment in Nebraska (Replicates: 10)

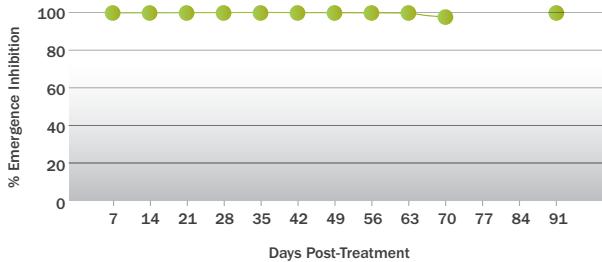

Treatment included one MetaLarv XRP per catch basin.

#### FIELD STUDY

EI of *Culex quinquefasciatus* in naturally infested catch basins after treatment in Florida (Replicates: 20)

Treatment included one MetaLarv XRP per catch basin.

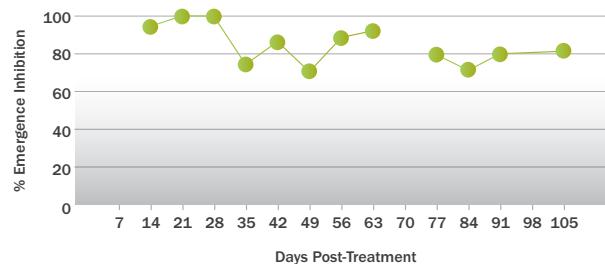

Duration of residual control is generally determined by habitat conditions and application rate. Consult your local Valent BioSciences or distributor representative for details regarding local conditions.

#### FIELD STUDY

EI of *Culex pipiens* in naturally infested catch basins after treatment in Oregon (Replicates: 10)

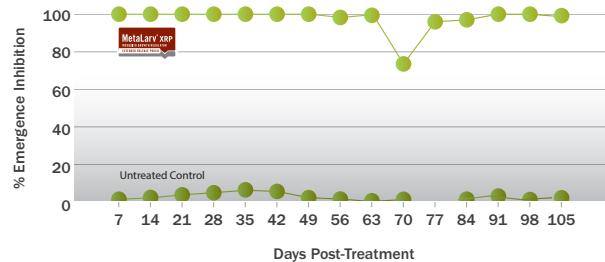

Treatment included one MetaLarv XRP per catch basin.

#### MICROCOSM STUDY

EI of *Culex quinquefasciatus* in simulated catch basins after treatment in California (Replicates: 5)

Treatment included one MetaLarv XRP per catch basin.
